

Is Someone Watching?

Video Monitoring From

ComSouth
MONITORING SERVICES

Are you offering VIDEO MONITORING?

Video Monitoring is the New Wave of opportunity in the security industry. And while some companies are selling Nanny Cams & Granny Cams - single, cheap, stationary cameras - these systems are extremely limited and rely on the end-user's ability to always have their pda with them and charged up. In addition, single camera systems simply don't provide enough coverage.

Introducing Video Monitoring From ComSouth.

Now you can offer your customer the right "trip" device so that when an event happens, ComSouth will be notified immediately and can take appropriate action. Protect your customers from...

- Breaches into secured areas
- Burglars coming through unprotected ceilings
- Water levels rising at an industrial site
- Thieves cutting through fences
- Suspicious loitering

...and thousands of other potential security events.

Video Monitoring Saves Time And Money.

The monthly cost for a full-time security guard can be as much as \$5,000. The addition of video cameras and reliable trip devices would cause any activity to send a 'live' video feed to a ComSouth operator, who would then contact either the on-site Guard, another responsible party, or Law Enforcement. A video verified event almost always receives an 'immediate response' from Law Enforcement, often reducing the average 'burglary' responses of 30 minutes or more, to less than 5 minutes.
